## extern Struct System Interface

### Names

1.1	<b>Struct Grids</b>	4
1.2	<b>Struct Stencils</b>	5
1.3	<b>Struct Matrices</b>	6
1.4	<b>Struct Vectors</b>	8

This interface represents a structured-grid conceptual view of a linear system.

**Author:** Robert D. Falgout

## 1.1

## Struct Grids

### Names

```
typedef struct hypre_StructGrid_struct* HYPRE_StructGrid
    A grid object is constructed out of several "boxes", defined on a global
    abstract index space
```

```
int
HYPRE_StructGridCreate (MPIComm comm, int ndim,
    HYPRE_StructGrid *grid)
    Create an ndim-dimensional grid object
```

1.1.1	int <b>HYPRE_StructGridDestroy</b> (HYPRE_StructGrid grid) <i>Destroy a grid object</i> .....	5
-------	---	---

```
int
HYPRE_StructGridSetExtents (HYPRE_StructGrid grid, int *ilower,
    int *iupper)
    Set the extents for a box on the grid
```

```
int
```

**HYPRE\_StructGridAssemble** (HYPRE\_StructGrid grid)

*Finalize the construction of the grid before using*

int

**HYPRE\_StructGridSetPeriodic** (HYPRE\_StructGrid grid, int \*periodic)

*(Optional) Set periodic*

int

**HYPRE\_StructGridSetNumGhost** (HYPRE\_StructGrid grid,

int \*num\_ghost)

*(Optional) Set the ghost layer in the grid object*

1.1.1

int **HYPRE\_StructGridDestroy** (HYPRE\_StructGrid grid)

Destroy a grid object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

1.2

**Struct Stencils**

**Names**

typedef struct hypr\_structStencil\_struct\* **HYPRE\_StructStencil**

*The stencil object*

int

**HYPRE\_StructStencilCreate** (int ndim, int size,  
HYPRE\_StructStencil \*stencil)

*Create a stencil object for the specified number of spatial dimensions and stencil entries*

int

**HYPRE\_StructStencilDestroy** (HYPRE\_StructStencil stencil)

*Destroy a stencil object*

1.2.1

int

**HYPRE\_StructStencilSetElement** (HYPRE\_StructStencil stencil, int entry,  
int \*offset)

*Set a stencil entry .....*

6

```
int
HYPRE_StructStencilSetElement (HYPRE_StructStencil stencil, int entry, int
*offset)
```

Set a stencil entry.

NOTE: The name of this routine will eventually be changed to `HYPRE_StructStencilSetEntry`.

## Struct Matrices

### Names

```
typedef struct hypre_StructMatrix_struct* HYPRE_StructMatrix
    The matrix object

int
HYPRE_StructMatrixCreate (MPI_Comm comm, HYPRE_StructGrid grid,
    HYPRE_StructStencil stencil,
    HYPRE_StructMatrix *matrix)
    Create a matrix object

int
HYPRE_StructMatrixDestroy (HYPRE_StructMatrix matrix)
    Destroy a matrix object

int
HYPRE_StructMatrixInitialize (HYPRE_StructMatrix matrix)
    Prepare a matrix object for setting coefficient values

int
HYPRE_StructMatrixSetValues (HYPRE_StructMatrix matrix, int *index,
    int nentries, int *entries, double *values)
    Set matrix coefficients index by index

int
HYPRE_StructMatrixSetBoxValues (HYPRE_StructMatrix matrix,
    int *ilower, int *iupper, int nentries,
    int *entries, double *values)
    Set matrix coefficients a box at a time

int
```

**HYPRE\_StructMatrixSetConstantValues** (HYPRE\_StructMatrix matrix,  
int nentries, int \*entries,  
double \*values)

*Set matrix coefficients which are constant over the grid*

int

**HYPRE\_StructMatrixAddToValues** (HYPRE\_StructMatrix matrix,  
int \*index, int nentries, int \*entries,  
double \*values)

*Add to matrix coefficients index by index*

int

**HYPRE\_StructMatrixAddToBoxValues** (HYPRE\_StructMatrix matrix,  
int \*ilower, int \*iupper,  
int nentries, int \*entries,  
double \*values)

*Add to matrix coefficients a box at a time*

int

**HYPRE\_StructMatrixAddToConstantValues** (HYPRE\_StructMatrix  
matrix, int nentries,  
int \*entries, double \*values)

*Add to matrix coefficients which are constant over the grid*

int

**HYPRE\_StructMatrixAssemble** (HYPRE\_StructMatrix matrix)

*Finalize the construction of the matrix before using*

1.3.1

int

**HYPRE\_StructMatrixSetSymmetric** (HYPRE\_StructMatrix matrix,  
int symmetric)

*(Optional) Define symmetry properties of the matrix* ..... 7

1.3.2

int

**HYPRE\_StructMatrixSetConstantEntries** ( HYPRE\_StructMatrix matrix,  
int nentries, int \*entries )

*Specify which stencil entries are constant over the grid* ..... 8

int

**HYPRE\_StructMatrixSetNumGhost** (HYPRE\_StructMatrix matrix,  
int \*num\_ghost)

*(Optional) Set the ghost layer in the matrix*

1.3.3

int

**HYPRE\_StructMatrixPrint** (const char \*filename,  
HYPRE\_StructMatrix matrix, int all)

*Print the matrix to file* ..... 8

**1.3.1**

int

**HYPRE\_StructMatrixSetSymmetric** (HYPRE\_StructMatrix matrix, int  
symmetric)

(Optional) Define symmetry properties of the matrix. By default, matrices are assumed to be nonsymmetric. Significant storage savings can be made if the matrix is symmetric.

### 1.3.2

```
int
HYPRE_StructMatrixSetConstantEntries ( HYPRE_StructMatrix matrix, int
nentries, int *entries )
```

Specify which stencil entries are constant over the grid. Presently supported: - no entries constant (this function need not be called) - all entries constant - all but the diagonal entry constant

### 1.3.3

```
int
HYPRE_StructMatrixPrint (const char *filename, HYPRE_StructMatrix
matrix, int all)
```

Print the matrix to file. This is mainly for debugging purposes.

## 1.4

### Struct Vectors

#### Names

```
typedef struct hypre_StructVector_struct* HYPRE_StructVector
    The vector object

int
HYPRE_StructVectorCreate (MPI_Comm comm, HYPRE_StructGrid grid,
    HYPRE_StructVector *vector)
    Create a vector object

int
```

**HYPRE\_StructVectorDestroy** (HYPRE\_StructVector vector)

*Destroy a vector object*

int

**HYPRE\_StructVectorInitialize** (HYPRE\_StructVector vector)

*Prepare a vector object for setting coefficient values*

int

**HYPRE\_StructVectorSetValues** (HYPRE\_StructVector vector, int \*index,  
double value)

*Set vector coefficients index by index*

int

**HYPRE\_StructVectorSetBoxValues** (HYPRE\_StructVector vector,  
int \*ilower, int \*iupper,  
double \*values)

*Set vector coefficients a box at a time*

int

**HYPRE\_StructVectorAddToValues** (HYPRE\_StructVector vector,  
int \*index, double value)

*Set vector coefficients index by index*

int

**HYPRE\_StructVectorAddToBoxValues** (HYPRE\_StructVector vector,  
int \*ilower, int \*iupper,  
double \*values)

*Set vector coefficients a box at a time*

int

**HYPRE\_StructVectorAssemble** (HYPRE\_StructVector vector)

*Finalize the construction of the vector before using*

int

**HYPRE\_StructVectorGetValues** (HYPRE\_StructVector vector, int \*index,  
double \*value)

*Get vector coefficients index by index*

int

**HYPRE\_StructVectorGetBoxValues** (HYPRE\_StructVector vector,  
int \*ilower, int \*iupper,  
double \*values)

*Get vector coefficients a box at a time*

1.4.1

int

**HYPRE\_StructVectorPrint** (const char \*filename,  
HYPRE\_StructVector vector, int all)

*Print the vector to file .....*

9

1.4.1

int  
**HYPRE\_StructVectorPrint** (const char \*filename, HYPRE\_StructVector vector,  
int all)

Print the vector to file. This is mainly for debugging purposes.

## extern SStruct System Interface

### Names

	int	
	<b>HYPRE_SStructGridSetPeriodic</b> (HYPRE_SStructGrid grid, int part, int *periodic) <i>(Optional) Set periodic for a particular part</i>	
	int	
	<b>HYPRE_SStructGridSetNumGhost</b> (HYPRE_SStructGrid grid, int *num_ghost) <i>Setting ghost in the sgrids</i>	

2.1.1

```
#define HYPRE_SStructGrid
```

A grid object is constructed out of several structured “parts” and an optional unstructured “part”. Each structured part has its own abstract index space.

```
#define HYPRE_SStructVariable
```

An enumerated type that supports cell centered, node centered, face centered, and edge centered variables. Face centered variables are split into x-face, y-face, and z-face variables, and edge centered variables are split into x-edge, y-edge, and z-edge variables. The edge centered variable types are only used in 3D. In 2D, edge centered variables are handled by the face centered types.

Variables are referenced relative to an abstract (cell centered) index in the following way:

- cell centered variables are aligned with the index;
- node centered variables are aligned with the cell corner at relative index  $(1/2, 1/2, 1/2)$ ;
- x-face, y-face, and z-face centered variables are aligned with the faces at relative indexes  $(1/2, 0, 0)$ ,  $(0, 1/2, 0)$ , and  $(0, 0, 1/2)$ , respectively;
- x-edge, y-edge, and z-edge centered variables are aligned with the edges at relative indexes  $(0, 1/2, 1/2)$ ,  $(1/2, 0, 1/2)$ , and  $(1/2, 1/2, 0)$ , respectively.

The supported identifiers are:

- HYPRE\_SSTRUCT\_VARIABLE\_CELL
- HYPRE\_SSTRUCT\_VARIABLE\_NODE
- HYPRE\_SSTRUCT\_VARIABLE\_XFACE
- HYPRE\_SSTRUCT\_VARIABLE\_YFACE
- HYPRE\_SSTRUCT\_VARIABLE\_ZFACE
- HYPRE\_SSTRUCT\_VARIABLE\_XEDGE
- HYPRE\_SSTRUCT\_VARIABLE\_YEDGE
- HYPRE\_SSTRUCT\_VARIABLE\_ZEDGE

NOTE: Although variables are referenced relative to a unique abstract cell-centered index, some variables are associated with multiple grid cells. For example, node centered variables in 3D are associated with 8 cells (away from boundaries). Although grid cells are distributed uniquely to different processes, variables may be owned by multiple processes because they may be associated with multiple cells.

### 2.1.3

```
int HYPRE_SStructGridDestroy (HYPRE_SStructGrid grid)
```

Destroy a grid object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

### 2.1.4

```
int  
HYPRE_SStructGridAddVariables (HYPRE_SStructGrid grid, int part, int  
*index, int nvars, HYPRE_SStructVariable *vartypes)
```

Describe additional variables that live at a particular index. These variables are appended to the array of variables set in `HYPRE_SStructGridSetVariables` (→ *page 12*), and are referenced as such.

### 2.1.5

```
int  
HYPRE_SStructGridSetNeighborBox (HYPRE_SStructGrid grid, int part, int  
*ilower, int *iupper, int nbor_part, int *nbor_ilower, int *nbor_iupper, int  
*index_map)
```

Describe how regions just outside of a part relate to other parts. This is done a box at a time.

The indexes `ilower` and `iupper` map directly to the indexes `nbor_ilower` and `nbor_iupper`. Although, it is required that indexes increase from `ilower` to `iupper`, indexes may increase and/or decrease from `nbor_ilower` to `nbor_iupper`.

The `index_map` describes the mapping of indexes 0, 1, and 2 on part `part` to the corresponding indexes on part `nbor_part`. For example, triple (1, 2, 0) means that indexes 0, 1, and 2 on part `part` map to indexes 1, 2, and 0 on part `nbor_part`, respectively.

NOTE: All parts related to each other via this routine must have an identical list of variables and variable types. For example, if part 0 has only two variables on it, a cell centered variable and a node centered variable, and we declare part 1 to be a neighbor of part 0, then part 1 must also have only two variables on it, and they must be of type cell and node.

### 2.1.6

```
int
HYPRE_SStructGridAddUnstructuredPart (HYPRE_SStructGrid grid, int
ilower, int iupper)
```

Add an unstructured part to the grid. The variables in the unstructured part of the grid are referenced by a global rank between 0 and the total number of unstructured variables minus one. Each process owns some unique consecutive range of variables, defined by `ilower` and `iupper`.

NOTE: This is just a placeholder. This part of the interface is not finished.

## 2.2

### SStruct Stencils

#### Names

```
typedef struct hypre_SStructStencil_struct* HYPRE_SStructStencil
The stencil object
```

```
int
HYPRE_SStructStencilCreate (int ndim, int size,
                             HYPRE_SStructStencil *stencil)
Create a stencil object for the specified number of spatial dimensions and
stencil entries
```

```
int
HYPRE_SStructStencilDestroy (HYPRE_SStructStencil stencil)
Destroy a stencil object
```

```
int
HYPRE_SStructStencilSetEntry (HYPRE_SStructStencil stencil, int entry,
                                int *offset, int var)
Set a stencil entry
```

## SStruct Graphs

### Names

typedef struct hypre\_SStructGraph\_struct\* **HYPRE\_SStructGraph**  
*The graph object is used to describe the nonzero structure of a matrix*

int  
**HYPRE\_SStructGraphCreate** (MPI\_Comm comm,  
 HYPRE\_SStructGrid grid,  
 HYPRE\_SStructGraph \*graph)  
*Create a graph object*

int  
**HYPRE\_SStructGraphDestroy** (HYPRE\_SStructGraph graph)  
*Destroy a graph object*

int  
**HYPRE\_SStructGraphSetStencil** (HYPRE\_SStructGraph graph, int part,  
 int var, HYPRE\_SStructStencil stencil)  
*Set the stencil for a variable on a structured part of the grid*

2.3.1 int  
**HYPRE\_SStructGraphAddEntries** (HYPRE\_SStructGraph graph, int part,  
 int \*index, int var, int to\_part,  
 int \*to\_index, int to\_var)  
*Add a non-stencil graph entry at a particular index* ..... 16

2.3.2 int  
**HYPRE\_SStructGraphSetObjectType** (HYPRE\_SStructGraph graph,  
 int type)  
*It is used before AddEntries and Assemble to compute the right ranks in the graph* ..... 17

int  
**HYPRE\_SStructGraphAssemble** (HYPRE\_SStructGraph graph)  
*Finalize the construction of the graph before using*

### 2.3.1

int  
**HYPRE\_SStructGraphAddEntries** (HYPRE\_SStructGraph graph, int part, int  
 \*index, int var, int to\_part, int \*to\_index, int to\_var)

Add a non-stencil graph entry at a particular index. This graph entry is appended to the existing graph entries, and is referenced as such.

NOTE: Users are required to set graph entries on all processes that own the associated variables. This means that some data will be multiply defined.

### 2.3.2

```
int
HYPRE_SStructGraphSetObjectType (HYPRE_SStructGraph graph, int
type)
```

It is used before AddEntries and Assemble to compute the right ranks in the graph. Currently, type can be either HYPRE\_SSTRUCT (the default) or HYPRE\_PARCSR.

## 2.4

### SStruct Matrices

#### Names

```
typedef struct hypre_SStructMatrix_struct* HYPRE_SStructMatrix
The matrix object
```

```
int
HYPRE_SStructMatrixCreate (MPI_Comm comm,
HYPRE_SStructGraph graph,
HYPRE_SStructMatrix *matrix)
Create a matrix object
```

```
int
HYPRE_SStructMatrixDestroy (HYPRE_SStructMatrix matrix)
Destroy a matrix object
```

```
int
HYPRE_SStructMatrixInitialize (HYPRE_SStructMatrix matrix)
Prepare a matrix object for setting coefficient values
```

```
2.4.1 int
HYPRE_SStructMatrixSetValues (HYPRE_SStructMatrix matrix, int part,
int *index, int var, int nentries,
int *entries, double *values)
Set matrix coefficients index by index ..... 19
```

```
2.4.2 int
```

	<b>HYPRE_SStructMatrixSetBoxValues</b> (HYPRE_SStructMatrix matrix, int part, int *ilower, int *iupper, int var, int nentries, int *entries, double *values)	
	<i>Set matrix coefficients a box at a time</i> .....	19
2.4.3	int	
	<b>HYPRE_SStructMatrixAddToValues</b> (HYPRE_SStructMatrix matrix, int part, int *index, int var, int nentries, int *entries, double *values)	
	<i>Add to matrix coefficients index by index</i> .....	20
2.4.4	int	
	<b>HYPRE_SStructMatrixAddToBoxValues</b> (HYPRE_SStructMatrix matrix, int part, int *ilower, int *iupper, int var, int nentries, int *entries, double *values)	
	<i>Add to matrix coefficients a box at a time</i> .....	20
	int	
	<b>HYPRE_SStructMatrixAssemble</b> (HYPRE_SStructMatrix matrix)	
	<i>Finalize the construction of the matrix before using</i>	
2.4.5	int	
	<b>HYPRE_SStructMatrixSetSymmetric</b> (HYPRE_SStructMatrix matrix, int part, int var, int to_var, int symmetric)	
	<i>Define symmetry properties for the stencil entries in the matrix</i> .....	21
	int	
	<b>HYPRE_SStructMatrixSetNSSymmetric</b> (HYPRE_SStructMatrix matrix, int symmetric)	
	<i>Define symmetry properties for all non-stencil matrix entries</i>	
2.4.6	int	
	<b>HYPRE_SStructMatrixSetObjectType</b> (HYPRE_SStructMatrix matrix, int type)	
	<i>Set the storage type of the matrix object to be constructed</i> .....	21
2.4.7	int	
	<b>HYPRE_SStructMatrixGetObject</b> (HYPRE_SStructMatrix matrix, void **object)	
	<i>Get a reference to the constructed matrix object</i> .....	21
	int	
	<b>HYPRE_SStructMatrixSetComplex</b> (HYPRE_SStructMatrix matrix)	
	<i>Set the matrix to be complex</i>	
2.4.8	int	
	<b>HYPRE_SStructMatrixPrint</b> (const char *filename, HYPRE_SStructMatrix matrix, int all)	
	<i>Print the matrix to file</i> .....	22

```

int
HYPRE_SStructMatrixSetValues (HYPRE_SStructMatrix matrix, int part, int
*index, int var, int nentries, int *entries, double *values)

```

Set matrix coefficients index by index.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

NOTE: The entries in this routine must all be of the same type: either stencil or non-stencil, but not both. Also, if they are stencil entries, they must all represent couplings to the same variable type (there are no such restrictions for non-stencil entries).

If the matrix is complex, then `values` consists of pairs of doubles representing the real and imaginary parts of each complex value.

**See Also:** `HYPRE_SStructMatrixSetComplex` (*→ page 18*)

```

int
HYPRE_SStructMatrixSetBoxValues (HYPRE_SStructMatrix matrix, int
part, int *ilower, int *iupper, int var, int nentries, int *entries, double *values)

```

Set matrix coefficients a box at a time.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

NOTE: The entries in this routine must all be of the same type: either stencil or non-stencil, but not both. Also, if they are stencil entries, they must all represent couplings to the same variable type (there are no such restrictions for non-stencil entries).

If the matrix is complex, then `values` consists of pairs of doubles representing the real and imaginary parts of each complex value.

**See Also:** `HYPRE_SStructMatrixSetComplex` (*→ page 18*)

```

int
HYPRE_SStructMatrixAddToValues (HYPRE_SStructMatrix matrix, int part,
int *index, int var, int nentries, int *entries, double *values)

```

Add to matrix coefficients index by index.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

NOTE: The entries in this routine must all be of the same type: either stencil or non-stencil, but not both. Also, if they are stencil entries, they must all represent couplings to the same variable type.

If the matrix is complex, then `values` consists of pairs of doubles representing the real and imaginary parts of each complex value.

**See Also:** `HYPRE_SStructMatrixSetComplex` (*→ page 18*)

```

int
HYPRE_SStructMatrixAddToBoxValues (HYPRE_SStructMatrix matrix, int
part, int *ilower, int *iupper, int var, int nentries, int *entries, double *values)

```

Add to matrix coefficients a box at a time.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

NOTE: The entries in this routine must all be of stencil type. Also, they must all represent couplings to the same variable type.

If the matrix is complex, then `values` consists of pairs of doubles representing the real and imaginary parts of each complex value.

**See Also:** `HYPRE_SStructMatrixSetComplex` (*→ page 18*)

#### 2.4.5

```
int
HYPRE_SStructMatrixSetSymmetric (HYPRE_SStructMatrix matrix, int
part, int var, int to_var, int symmetric)
```

Define symmetry properties for the stencil entries in the matrix. The boolean argument `symmetric` is applied to stencil entries on part `part` that couple variable `var` to variable `to_var`. A value of -1 may be used for `part`, `var`, or `to_var` to specify “all”. For example, if `part` and `to_var` are set to -1, then the boolean is applied to stencil entries on all parts that couple variable `var` to all other variables.

By default, matrices are assumed to be nonsymmetric. Significant storage savings can be made if the matrix is symmetric.

#### 2.4.6

```
int
HYPRE_SStructMatrixSetObjectType (HYPRE_SStructMatrix matrix, int
type)
```

Set the storage type of the matrix object to be constructed. Currently, `type` can be either `HYPRE_SSTRUCT` (the default), `HYPRE_STRUCT`, or `HYPRE_PARCSR`.

**See Also:** `HYPRE_SStructMatrixGetObject` (→2.4.7, page 21)

#### 2.4.7

```
int
HYPRE_SStructMatrixGetObject (HYPRE_SStructMatrix matrix, void
**object)
```

Get a reference to the constructed matrix object.

**See Also:** `HYPRE_SStructMatrixSetObjectType` (→2.4.6, page 21)

```
int
HYPRE_SStructMatrixPrint (const char *filename, HYPRE_SStructMatrix
matrix, int all)
```

Print the matrix to file. This is mainly for debugging purposes.

## SStruct Vectors

### Names

#### 2.5.1

int <b>HYPRE_SStructVectorSetValues</b> (HYPRE_SStructVector vector, int part, int *index, int var, double *value)
--

Set vector coefficients index by index.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

If the vector is complex, then `value` consists of a pair of doubles representing the real and imaginary parts of the complex value.

**See Also:** `HYPRE_SStructVectorSetComplex` (*→ page 23*)

### 2.5.2

```
int
HYPRE_SStructVectorSetBoxValues (HYPRE_SStructVector vector, int part,
int *ilower, int *iupper, int var, double *values)
```

Set vector coefficients a box at a time.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

If the vector is complex, then `values` consists of pairs of doubles representing the real and imaginary parts of each complex value.

**See Also:** `HYPRE_SStructVectorSetComplex` (*→ page 23*)

### 2.5.3

```
int
HYPRE_SStructVectorAddToValues (HYPRE_SStructVector vector, int part,
int *index, int var, double *value)
```

Set vector coefficients index by index.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

If the vector is complex, then `value` consists of a pair of doubles representing the real and imaginary parts of the complex value.

**See Also:** `HYPRE_SStructVectorSetComplex` (*→ page 23*)

#### 2.5.4

```
int
HYPRE_SStructVectorAddToBoxValues (HYPRE_SStructVector vector, int
part, int *ilower, int *iupper, int var, double *values)
```

Set vector coefficients a box at a time.

NOTE: Users are required to set values on all processes that own the associated variables. This means that some data will be multiply defined.

If the vector is complex, then `values` consists of pairs of doubles representing the real and imaginary parts of each complex value.

**See Also:** `HYPRE_SStructVectorSetComplex` (*→ page 23*)

#### 2.5.5

```
int
HYPRE_SStructVectorGetValues (HYPRE_SStructVector vector, int part, int
*index, int var, double *value)
```

Get vector coefficients index by index.

NOTE: Users may only get values on processes that own the associated variables.

If the vector is complex, then `value` consists of a pair of doubles representing the real and imaginary parts of the complex value.

**See Also:** `HYPRE_SStructVectorSetComplex` (*→ page 23*)

## 2.5.6

```
int
HYPRE_SStructVectorGetBoxValues (HYPRE_SStructVector vector, int part,
int *ilower, int *iupper, int var, double *values)
```

Get vector coefficients a box at a time.

NOTE: Users may only get values on processes that own the associated variables.

If the vector is complex, then `values` consists of pairs of doubles representing the real and imaginary parts of each complex value.

**See Also:** `HYPRE_SStructVectorSetComplex` (*→ page 23*)

## 2.5.7

```
int
HYPRE_SStructVectorSetObjectType (HYPRE_SStructVector vector, int
type)
```

Set the storage type of the vector object to be constructed. Currently, `type` can be either `HYPRE_SSTRUCT` (the default) or `HYPRE_PARCSR`.

**See Also:** `HYPRE_SStructVectorGetObject` (*→2.5.8, page 26*)

## 2.5.8

```
int
HYPRE_SStructVectorGetObject (HYPRE_SStructVector vector, void
**object)
```

Get a reference to the constructed vector object.

**See Also:**

`HYPRE_SStructVectorSetObjectType` (→2.5.7, *page 26*)

### 2.5.9

```
int  
HYPRE_SStructVectorPrint (const char *filename, HYPRE_SStructVector  
vector, int all)
```

Print the vector to file. This is mainly for debugging purposes.

## extern IJ System Interface

### Names

3.1	<b>IJ Matrices</b>	28
3.2	<b>IJ Vectors</b>	34

This interface represents a linear-algebraic conceptual view of a linear system. The 'I' and 'J' in the name are meant to be mnemonic for the traditional matrix notation A(I,J).

### 3.1

## IJ Matrices

### Names

	typedef struct hypre_IJMatrix_struct* <b>HYPRE_IJMatrix</b> <i>The matrix object</i>

	<i>Print the matrix to file</i> .....	34

### 3.1.1

```
int
HYPRE_IJMatrixCreate (MPI_Comm comm, int ilower, int iupper, int jlower,
int jupper, HYPRE_IJMatrix *matrix)
```

Create a matrix object. Each process owns some unique consecutive range of rows, indicated by the global row indices `ilower` and `iupper`. The row data is required to be such that the value of `ilower` on any process  $p$  be exactly one more than the value of `iupper` on process  $p - 1$ . Note that the first row of the global matrix may start with any integer value. In particular, one may use zero- or one-based indexing.

For square matrices, `jlower` and `jupper` typically should match `ilower` and `iupper`, respectively. For rectangular matrices, `jlower` and `jupper` should define a partitioning of the columns. This partitioning must be used for any vector  $v$  that will be used in matrix-vector products with the rectangular matrix. The matrix data structure may use `jlower` and `jupper` to store the diagonal blocks (rectangular in general) of the matrix separately from the rest of the matrix.

Collective.

### 3.1.2

```
int HYPRE_IJMatrixDestroy (HYPRE_IJMatrix matrix)
```

Destroy a matrix object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

### 3.1.3

```
int HYPRE_IJMatrixInitialize (HYPRE_IJMatrix matrix)
```

Prepare a matrix object for setting coefficient values. This routine will also re-initialize an already assembled matrix, allowing users to modify coefficient values.

### 3.1.4

```
int  
HYPRE_IJMatrixSetValues (HYPRE_IJMatrix matrix, int nrows, int *ncols,  
const int *rows, const int *cols, const double *values)
```

Sets values for `nrows` rows or partial rows of the matrix. The arrays `ncols` and `rows` are of dimension `nrows` and contain the number of columns in each row and the row indices, respectively. The array `cols` contains the column indices for each of the `rows`, and is ordered by rows. The data in the `values` array corresponds directly to the column entries in `cols`. Erases any previous values at the specified locations and replaces them with new ones, or, if there was no value there before, inserts a new one.

Not collective.

### 3.1.5

```
int  
HYPRE_IJMatrixAddToValues (HYPRE_IJMatrix matrix, int nrows, int  
*ncols, const int *rows, const int *cols, const double *values)
```

Adds to values for `nrows` rows or partial rows of the matrix. Usage details are analogous to `HYPRE_IJMatrixSetValues` (→3.1.4, *page 31*). Adds to any previous values at the specified locations, or, if there was no value there before, inserts a new one.

Not collective.

### 3.1.6

```
int  
HYPRE_IJMatrixGetValues (HYPRE_IJMatrix matrix, int nrows, int *ncols,  
int *rows, int *cols, double *values)
```

Gets values for `nrows` rows or partial rows of the matrix. Usage details are analogous to `HYPRE_IJMatrixSetValues` (→3.1.4, *page 31*).

### 3.1.7

```
int HYPRE_IJMatrixSetObjectType (HYPRE_IJMatrix matrix, int type)
```

Set the storage type of the matrix object to be constructed. Currently, `type` can only be `HYPRE_PARCSR`.

Not collective, but must be the same on all processes.

**See Also:** `HYPRE_IJMatrixGetObject` (→3.1.8, *page 32*)

### 3.1.8

```
int HYPRE_IJMatrixGetObject (HYPRE_IJMatrix matrix, void **object)
```

Get a reference to the constructed matrix object.

**See Also:** `HYPRE_IJMatrixSetObjectType` (→3.1.7, *page 32*)

### 3.1.9

```
int HYPRE_IJMatrixSetRowSizes (HYPRE_IJMatrix matrix, const int *sizes)
```

(Optional) Set the max number of nonzeros to expect in each row. The array `sizes` contains estimated sizes for each row on this process. This call can significantly improve the efficiency of matrix construction, and should always be utilized if possible.

Not collective.

### 3.1.10

```
int
HYPRE_IJMatrixSetDiagOffdSizes (HYPRE_IJMatrix matrix, const int
*diag_sizes, const int *offdiag_sizes)
```

(Optional) Set the max number of nonzeros to expect in each row of the diagonal and off-diagonal blocks. The diagonal block is the submatrix whose column numbers correspond to rows owned by this process, and the off-diagonal block is everything else. The arrays `diag_sizes` and `offdiag_sizes` contain estimated sizes for each row of the diagonal and off-diagonal blocks, respectively. This routine can significantly improve the efficiency of matrix construction, and should always be utilized if possible.

Not collective.

### 3.1.11

```
int
HYPRE_IJMatrixSetMaxOffProcElmts (HYPRE_IJMatrix matrix, int
max_off_proc_elmts)
```

(Optional) Sets the maximum number of elements that are expected to be set (or added) on other processors from this processor. This routine can significantly improve the efficiency of matrix construction, and should always be utilized if possible.

Not collective.

### 3.1.12

```
int
HYPRE_IJMatrixRead (const char *filename, MPI_Comm comm, int type,
HYPRE_IJMatrix *matrix)
```

Read the matrix from file. This is mainly for debugging purposes.

### 3.1.13

```
int HYPRE_IJMatrixPrint (HYPRE_IJMatrix matrix, const char *filename)
```

Print the matrix to file. This is mainly for debugging purposes.

## 3.2

### IJ Vectors

#### Names

3.2.11	int <b>HYPRE_IJVectorPrint</b> (HYPRE_IJVector vector, const char *filename) <i>Print the vector to file</i> .....	39

### 3.2.1

```
int  
HYPRE_IJVectorCreate (MPL_Comm comm, int jlower, int jupper,  
HYPRE_IJVector *vector)
```

Create a vector object. Each process owns some unique consecutive range of vector unknowns, indicated by the global indices `jlower` and `jupper`. The data is required to be such that the value of `jlower` on any process  $p$  be exactly one more than the value of `jupper` on process  $p - 1$ . Note that the first index of the global vector may start with any integer value. In particular, one may use zero- or one-based indexing.

Collective.

### 3.2.2

```
int HYPRE_IJVectorDestroy (HYPRE_IJVector vector)
```

Destroy a vector object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

### 3.2.3

```
int HYPRE_IJVectorInitialize (HYPRE_IJVector vector)
```

Prepare a vector object for setting coefficient values. This routine will also re-initialize an already assembled vector, allowing users to modify coefficient values.

### 3.2.4

```
int  
HYPRE_IJVectorSetMaxOffProcElmts (HYPRE_IJVector vector, int  
max_off_proc_elmts)
```

(Optional) Sets the maximum number of elements that are expected to be set (or added) on other processors from this processor. This routine can significantly improve the efficiency of matrix construction, and should always be utilized if possible.

Not collective.

### 3.2.5

```
int  
HYPRE_IJVectorSetValues (HYPRE_IJVector vector, int nvalues, const int  
*indices, const double *values)
```

Sets values in vector. The arrays `values` and `indices` are of dimension `nvalues` and contain the vector values to be set and the corresponding global vector indices, respectively. Erases any previous values at the specified locations and replaces them with new ones.

Not collective.

### 3.2.6

```
int  
HYPRE_IJVectorAddToValues (HYPRE_IJVector vector, int nvalues, const int  
*indices, const double *values)
```

Adds to values in vector. Usage details are analogous to `HYPRE_IJVectorSetValues` ([→3.2.5, page 37](#)).

Not collective.

### 3.2.7

```
int  
HYPRE_IJVectorGetValues (HYPRE_IJVector vector, int nvalues, const int  
*indices, double *values)
```

Gets values in vector. Usage details are analogous to `HYPRE_IJVectorSetValues` (→3.2.5, *page 37*).

Not collective.

### 3.2.8

```
int HYPRE_IJVectorSetObjectType (HYPRE_IJVector vector, int type)
```

Set the storage type of the vector object to be constructed. Currently, `type` can only be `HYPRE_PARCSR`.

Not collective, but must be the same on all processes.

**See Also:** `HYPRE_IJVectorGetObject` (→3.2.9, *page 38*)

### 3.2.9

```
int HYPRE_IJVectorGetObject (HYPRE_IJVector vector, void **object)
```

Get a reference to the constructed vector object.

**See Also:** `HYPRE_IJVectorSetObjectType` (→3.2.8, *page 38*)

### 3.2.10

```
int  
HYPRE_IJVectorRead (const char *filename, MPLComm comm, int type,  
HYPRE_IJVector *vector)
```

Read the vector from file. This is mainly for debugging purposes.

```
int HYPRE_IJVectorPrint (HYPRE_IJVector vector, const char *filename)
```

Print the vector to file. This is mainly for debugging purposes.

## extern Struct Solvers

### Names

4.1	<b>Struct Solvers</b>	40
4.2	<b>Struct Jacobi Solver</b>	40
4.3	<b>Struct PFMG Solver</b>	42
4.4	<b>Struct SMG Solver</b>	44
4.5	<b>Struct PCG Solver</b>	45
4.6	<b>Struct GMRES Solver</b>	47
4.7	<b>Struct BiCGSTAB Solver</b>	48

These solvers use matrix/vector storage schemes that are tailored to structured grid problems.

## 4.1

*(Optional) Set number of post-relaxation sweeps*

int  
**HYPRE\_StructPFMGSetSkipRelax** (HYPRE\_StructSolver solver,  
int skip\_relax)  
*(Optional) Skip relaxation on certain grids for isotropic problems*

int  
**HYPRE\_StructPFMGSetLogging** (HYPRE\_StructSolver solver, int logging)  
*(Optional) Set the amount of logging to do*

int  
**HYPRE\_StructPFMGSetPrintLevel** (HYPRE\_StructSolver solver,  
int print\_level)  
*(Optional) To allow printing to the screen*

int  
**HYPRE\_StructPFMGGetNumIterations** (HYPRE\_StructSolver solver,  
int \*num\_iterations)  
*Return the number of iterations taken*

int  
**HYPRE\_StructPFMGGetFinalRelativeResidualNorm** (HYPRE\_StructSolver  
solver,  
double \*norm)  
*Return the norm of the final relative residual*

## Struct SMG Solver

### Names

int  
**HYPRE\_StructSMGCreate** (MPI\_Comm comm,  
HYPRE\_StructSolver \*solver)  
*Create a solver object*

int  
**HYPRE\_StructSMGDestroy** (HYPRE\_StructSolver solver)  
*Destroy a solver object*

int  
**HYPRE\_StructSMGSetup** (HYPRE\_StructSolver solver,  
HYPRE\_StructMatrix A,  
HYPRE\_StructVector b, HYPRE\_StructVector x)

int  
**HYPRE\_StructSMGSolve** (HYPRE\_StructSolver solver,  
HYPRE\_StructMatrix A, HYPRE\_StructVector b,  
HYPRE\_StructVector x)  
*Solve the system*

int  
**HYPRE\_StructSMGSetTol** (HYPRE\_StructSolver solver, double tol)  
*(Optional) Set the convergence tolerance*

int  
**HYPRE\_StructSMGSetMaxIter** (HYPRE\_StructSolver solver, int max\_iter)  
*(Optional) Set maximum number of iterations*

int  
**HYPRE\_StructSMGSetRelChange** (HYPRE\_StructSolver solver,  
int rel\_change)  
*(Optional) Additionally require that the relative difference in successive iterates be small*

int  
**HYPRE\_StructSMGSetZeroGuess** (HYPRE\_StructSolver solver)  
*(Optional) Use a zero initial guess*

int  
**HYPRE\_StructSMGSetNonZeroGuess** (HYPRE\_StructSolver solver)  
*(Optional) Use a nonzero initial guess*

int  
**HYPRE\_StructSMGSetNumPreRelax** (HYPRE\_StructSolver solver,  
int num\_pre\_relax)  
*(Optional) Set number of pre-relaxation sweeps*

int

**HYPRE\_StructSMGSetNumPostRelax** (HYPRE\_StructSolver solver,  
int num\_post\_relax)

*(Optional) Set number of post-relaxation sweeps*

int

**HYPRE\_StructSMGSetLogging** (HYPRE\_StructSolver solver, int logging)

*(Optional) Set the amount of logging to do*

int

**HYPRE\_StructSMGSetPrintLevel** (HYPRE\_StructSolver solver,  
int print\_level)

*(Optional) To allow printing to the screen*

int

**HYPRE\_StructSMGGetNumIterations** (HYPRE\_StructSolver solver,  
int \*num\_iterations)

*Return the number of iterations taken*

int

**HYPRE\_StructSMGGetFinalRelativeResidualNorm** (HYPRE\_StructSolver  
solver,  
double \*norm)

*Return the norm of the final relative residual*

HYPRE\_StructMatrix A,  
HYPRE\_StructVector b, HYPRE\_StructVector x)

int

**HYPRE\_StructPCGSolve** (HYPRE\_StructSolver solver,  
HYPRE\_StructMatrix A, HYPRE\_StructVector b,  
HYPRE\_StructVector x)

*Solve the system*

int

**HYPRE\_StructPCGSetTol** (HYPRE\_StructSolver solver, double tol)  
*(Optional) Set the convergence tolerance*

int  
**HYPRE\_StructPCGSetMaxIter** (HYPRE\_StructSolver solver, int max\_iter)  
*(Optional) Set maximum number of iterations*

int  
**HYPRE\_StructPCGSetTwoNorm** (HYPRE\_StructSolver solver,  
int two\_norm)  
*(Optional) Use the two-norm in stopping criteria*

int  
**HYPRE\_StructPCGSetRelChange** (HYPRE\_StructSolver solver,  
int rel\_change)  
*(Optional) Additionally require that the relative difference in successive iterates be small*

int  
**HYPRE\_StructPCGSetPrecond** (HYPRE\_StructSolver solver,  
HYPRE\_PtrToStructSolverFcn precond,  
HYPRE\_PtrToStructSolverFcn  
precond\_setup,  
HYPRE\_StructSolver precond\_solver)  
*(Optional) Set the preconditioner to use*

int  
**HYPRE\_StructPCGSetLogging** (HYPRE\_StructSolver solver, int logging)  
*(Optional) Set the amount of logging to do*

int  
**HYPRE\_StructPCGSetPrintLevel** (HYPRE\_StructSolver solver, int level)  
*(Optional) Set the print level*

int  
**HYPRE\_StructPCGGetNumIterations** (HYPRE\_StructSolver solver,  
int \*num\_iterations)  
*Return the number of iterations taken*

int  
**HYPRE\_StructPCGGetFinalRelativeResidualNorm** (HYPRE\_StructSolver  
solver,  
double \*norm)  
*Return the norm of the final relative residual*

int  
**HYPRE\_StructPCGGetResidual** (HYPRE\_StructSolver solver,  
void \*\*residual)  
*Return the residual*

int  
**HYPRE\_StructDiagScaleSetup** (HYPRE\_StructSolver solver,  
HYPRE\_StructMatrix A,  
HYPRE\_StructVector y,  
HYPRE\_StructVector x)  
*Setup routine for diagonal preconditioning*

int

**HYPRE\_StructDiagScale** (HYPRE\_StructSolver solver,  
HYPRE\_StructMatrix HA,  
HYPRE\_StructVector Hy,  
HYPRE\_StructVector Hx)

*Solve routine for diagonal preconditioning*

void \*\*residual)  
*Return the residual*

**5.2.1**

int **HYPRE\_SStructPCGDestroy** (HYPRE\_SStructSolver solver)

Destroy a solver object. An object should be explicitly destroyed using this destructor when the user's code no longer needs direct access to it. Once destroyed, the object must not be referenced again. Note that the object may not be deallocated at the completion of this call, since there may be internal package references to the object. The object will then be destroyed when all internal reference counts go to zero.

**5.3**

## SStruct SysPFMG Solver

### Names

```
int
HYPRE_SStructSysPFMGCreate ( MPI_Comm comm,
                               HYPRE_SStructSolver *solver )
    Create a solver object

int
HYPRE_SStructSysPFMGDestroy (HYPRE_SStructSolver solver)
    Destroy a solver object

int
HYPRE_SStructSysPFMGSetup (HYPRE_SStructSolver solver,
                              HYPRE_SStructMatrix A,
                              HYPRE_SStructVector b,
                              HYPRE_SStructVector x)

int
HYPRE_SStructSysPFMGSolve (HYPRE_SStructSolver solver,
                              HYPRE_SStructMatrix A,
                              HYPRE_SStructVector b,
                              HYPRE_SStructVector x)
    Solve the system

int
HYPRE_SStructSysPFMGSetTol (HYPRE_SStructSolver solver, double tol)
    (Optional) Set the convergence tolerance

int
HYPRE_SStructSysPFMGSetMaxIter (HYPRE_SStructSolver solver,
                                   int max_iter)
    (Optional) Set maximum number of iterations

int
HYPRE_SStructSysPFMGSetRelChange (HYPRE_SStructSolver solver,
                                     int rel_change)
    (Optional) Additionally require that the relative difference in successive it-
    erates be small

int
HYPRE_SStructSysPFMGSetZeroGuess (HYPRE_SStructSolver solver)
    (Optional) Use a zero initial guess

int
```

**HYPRE\_SStructSysPFMGSetNonZeroGuess** (HYPRE\_SStructSolver solver)  
*(Optional) Use a nonzero initial guess*

int  
**HYPRE\_SStructSysPFMGSetRelaxType** (HYPRE\_SStructSolver solver, int relax\_type)  
*(Optional) Set relaxation type*

int  
**HYPRE\_SStructSysPFMGSetNumPreRelax** (HYPRE\_SStructSolver solver, int num\_pre\_relax)  
*(Optional) Set number of pre-relaxation sweeps*

int  
**HYPRE\_SStructSysPFMGSetNumPostRelax** (HYPRE\_SStructSolver solver, int num\_post\_relax)  
*(Optional) Set number of post-relaxation sweeps*

int  
**HYPRE\_SStructSysPFMGSetSkipRelax** (HYPRE\_SStructSolver solver, int skip\_relax)  
*(Optional) Skip relaxation on certain grids for isotropic problems*

int  
**HYPRE\_SStructSysPFMGSetLogging** (HYPRE\_SStructSolver solver, int logging)  
*(Optional) Set the amount of logging to do*

int  
**HYPRE\_SStructSysPFMGSetPrintLevel** (HYPRE\_SStructSolver solver, int print\_level)  
*(Optional) Set the print level*

int  
**HYPRE\_SStructSysPFMGGetNumIterations** (HYPRE\_SStructSolver solver, int \*num\_iterations)  
*Return the number of iterations taken*

int  
**HYPRE\_SStructSysPFMGGetFinalRelativeResidualNorm** (HYPRE\_SStructSolver solver, double \*norm)  
*Return the norm of the final relative residual*

int  
**HYPRE\_SStructFACGetFinalRelativeResidualNorm** (  
HYPRE\_SStructSolver  
solver,  
double \*norm)  
*Return the norm of the final relative residual*

## 5.7

### extern ParCSR Solvers

#### Names

5.7.1	<b>ParCSR Solvers</b>	60
5.7.2	<b>ParCSR BoomerAMG Solver and Preconditioner</b>	60
5.7.3	<b>ParCSR ParaSails Preconditioner</b>	79
5.7.4	<b>ParCSR Euclid Preconditioner</b>	84
5.7.5	<b>ParCSR Pilut Preconditioner</b>	

	.....	86
5.7.6	<b>ParCSR PCG Solver</b> .....	87
5.7.7	<b>ParCSR GMRES Solver</b> .....	88

These solvers use matrix/vector storage schemes that are taylorred for general sparse matrix systems.

**5.7.1**

**ParCSR Solvers**

**Names**

```
#define HYPRE_SOLVER_STRUCT
      The solver object
```

**5.7.2**

**ParCSR BoomerAMG Solver and Preconditioner**

**Names**

```
int
HYPRE_BoomerAMGCreate (HYPRE_Solver *solver)
      Create a solver object

int
HYPRE_BoomerAMGDestroy (HYPRE_Solver solver)
      Destroy a solver object

5.7.2.1 int
HYPRE_BoomerAMGSetup (HYPRE_Solver solver,
                       HYPRE_ParCSRMatrix A,
                       HYPRE_ParVector b, HYPRE_ParVector x)
      Set up the BoomerAMG solver or preconditioner ..... 65

5.7.2.2 int
```

	<b>HYPRE_BoomerAMGSolve</b> (HYPRE_Solver solver, HYPRE_ParCSRMatrix A, HYPRE_ParVector b, HYPRE_ParVector x) <i>Solve the system or apply AMG as a preconditioner</i> .....	65
5.7.2.3	int <b>HYPRE_BoomerAMGSolveT</b> (HYPRE_Solver solver, HYPRE_ParCSRMatrix A, HYPRE_ParVector b, HYPRE_ParVector x) <i>Solve the transpose system <math>A^T x = b</math> or apply AMG as a preconditioner to the transpose system</i> .....	66
5.7.2.4	int <b>HYPRE_BoomerAMGSetTol</b> (HYPRE_Solver solver, double tol) <i>(Optional) Set the convergence tolerance, if BoomerAMG is used as a solver</i> .....	66
5.7.2.5	int <b>HYPRE_BoomerAMGSetMaxIter</b> (HYPRE_Solver solver, int max_iter) <i>(Optional) Sets maximum number of iterations, if BoomerAMG is used as a solver</i> .....	66
5.7.2.6	int <b>HYPRE_BoomerAMGSetMaxLevels</b> (HYPRE_Solver solver, int max_levels) <i>(Optional) Sets maximum number of multigrid levels</i> .....	67
5.7.2.7	int <b>HYPRE_BoomerAMGSetStrongThreshold</b> (HYPRE_Solver solver, double strong_threshold) <i>(Optional) Sets AMG strength threshold</i> .....	67
5.7.2.8	int <b>HYPRE_BoomerAMGSetMaxRowSum</b> (HYPRE_Solver solver, double max_row_sum) <i>(Optional) Sets a parameter to modify the definition of strength for diagonal dominant portions of the matrix</i> .....	67
5.7.2.9	int <b>HYPRE_BoomerAMGSetCoarsenType</b> (HYPRE_Solver solver, int coarsen_type) <i>(Optional) Defines which parallel coarsening algorithm is used</i> .....	68
	int <b>HYPRE_BoomerAMGSetMeasureType</b> (HYPRE_Solver solver, int measure_type) <i>(Optional) Defines whether local or global measures are used</i>	
5.7.2.10	int <b>HYPRE_BoomerAMGSetCycleType</b> (HYPRE_Solver solver, int cycle_type) <i>(Optional) Defines the type of cycle</i> .....	68
5.7.2.11	int <b>HYPRE_BoomerAMGSetNumGridSweeps</b> (HYPRE_Solver solver, int *num_grid_sweeps) <i>(Optional) Defines the number of sweeps for the fine and coarse grid, the up and down cycle</i> .....	68
5.7.2.12	int	

	<b>HYPRE_BoomerAMGSetNumSweeps</b> (HYPRE_Solver solver, int num_sweeps)		
	<i>(Optional) Sets the number of sweeps</i> .....		69
5.7.2.13	int	<b>HYPRE_BoomerAMGSetCycleNumSweeps</b> (HYPRE_Solver solver, int num_sweeps, int k)	
	<i>(Optional) Sets the number of sweeps at a specified cycle</i> .....		69
5.7.2.14	int	<b>HYPRE_BoomerAMGSetGridRelaxType</b> (HYPRE_Solver solver, int *grid_relax_type)	
	<i>(Optional) Defines which smoother is used on the fine and coarse grid, the up and down cycle</i> .....		69
5.7.2.15	int	<b>HYPRE_BoomerAMGSetRelaxType</b> (HYPRE_Solver solver, int relax_type)	
	<i>(Optional) Defines the smoother to be used</i> .....		70
5.7.2.16	int	<b>HYPRE_BoomerAMGSetCycleRelaxType</b> (HYPRE_Solver solver, int relax_type, int k)	
	<i>(Optional) Defines the smoother at a given cycle</i> .....		70
5.7.2.17	int	<b>HYPRE_BoomerAMGSetRelaxOrder</b> (HYPRE_Solver solver, int relax_order)	
	<i>(Optional) Defines in which order the points are relaxed</i> .....		71
5.7.2.18	int	<b>HYPRE_BoomerAMGSetGridRelaxPoints</b> (HYPRE_Solver solver, int **grid_relax_points)	
	<i>(Optional) Defines in which order the points are relaxed</i> .....		71
5.7.2.19	int	<b>HYPRE_BoomerAMGSetRelaxWeight</b> (HYPRE_Solver solver, double *relax_weight)	
	<i>(Optional) Defines the relaxation weight for smoothed Jacobi and hybrid SOR</i> .....		71
5.7.2.20	int	<b>HYPRE_BoomerAMGSetRelaxWt</b> (HYPRE_Solver solver, double relax_weight)	
	<i>(Optional) Defines the relaxation weight for smoothed Jacobi and hybrid SOR on all levels</i> .....		72
5.7.2.21	int	<b>HYPRE_BoomerAMGSetLevelRelaxWt</b> (HYPRE_Solver solver, double relax_weight, int level)	
	<i>(Optional) Defines the relaxation weight for smoothed Jacobi and hybrid SOR on the user defined level</i> .....		72
5.7.2.22	int	<b>HYPRE_BoomerAMGSetOmega</b> (HYPRE_Solver solver, double *omega)	
	<i>(Optional) Defines the outer relaxation weight for hybrid SOR</i> .....		72
5.7.2.23	int		

	<b>HYPRE_BoomerAMGSetOuterWt</b> (HYPRE_Solver solver, double omega) (Optional) Defines the outer relaxation weight for hybrid SOR and SSOR on all levels .....	73
5.7.2.24	int <b>HYPRE_BoomerAMGSetLevelOuterWt</b> (HYPRE_Solver solver, double omega, int level) (Optional) Defines the outer relaxation weight for hybrid SOR or SSOR on the user defined level .....	73
	int <b>HYPRE_BoomerAMGSetDebugFlag</b> (HYPRE_Solver solver, int debug_flag) (Optional)	
	int <b>HYPRE_BoomerAMGGetNumIterations</b> (HYPRE_Solver solver, int *num_iterations) Returns the number of iterations taken	
	int <b>HYPRE_BoomerAMGGetFinalRelativeResidualNorm</b> (HYPRE_Solver solver, double *rel_resid_norm) Returns the norm of the final relative residual	
5.7.2.25	int <b>HYPRE_BoomerAMGSetTruncFactor</b> (HYPRE_Solver solver, double trunc_factor) (Optional) Defines a truncation factor for the interpolation .....	73
5.7.2.26	int <b>HYPRE_BoomerAMGSetSCommPkgSwitch</b> (HYPRE_Solver solver, double S_commpkg_switch) (Optional) Defines the largest strength threshold for which the strength matrix S uses the communication package of the operator A .....	74
5.7.2.27	int <b>HYPRE_BoomerAMGSetSmoothType</b> (HYPRE_Solver solver, int smooth_type) (Optional) Enables the use of more complex smoothers .....	74
5.7.2.28	int <b>HYPRE_BoomerAMGSetSmoothNumLevels</b> (HYPRE_Solver solver, int smooth_num_levels) (Optional) Sets the number of levels for more complex smoothers .....	74
5.7.2.29	int <b>HYPRE_BoomerAMGSetSmoothNumSweeps</b> (HYPRE_Solver solver, int smooth_num_sweeps) (Optional) Sets the number of sweeps for more complex smoothers .....	75
	int <b>HYPRE_BoomerAMGSetPrintLevel</b> (HYPRE_Solver solver, int print_level) (Optional) Requests automatic printing of solver performance and debugging data; default to 0 for no printing	
5.7.2.30	int	

	<b>HYPRE_BoomerAMGSetLogging</b> (HYPRE_Solver solver, int logging) (Optional) Requests additional computations for diagnostic and similar data to be logged by the user .....	75
5.7.2.31	int <b>HYPRE_BoomerAMGSetNumFunctions</b> (HYPRE_Solver solver, int num_functions) (Optional) Sets the size of the system of PDEs, if using the systems version .....	75
5.7.2.32	int <b>HYPRE_BoomerAMGSetNodal</b> (HYPRE_Solver solver, int nodal) (Optional) Sets whether to use the nodal systems version .....	76
5.7.2.33	int <b>HYPRE_BoomerAMGSetDofFunc</b> (HYPRE_Solver solver, int *dof_func) (Optional) Sets the mapping that assigns the function to each variable, if using the systems version .....	76
5.7.2.34	int <b>HYPRE_BoomerAMGSetVariant</b> (HYPRE_Solver solver, int variant) (Optional) Defines which variant of the Schwarz method is used .....	76
5.7.2.35	int <b>HYPRE_BoomerAMGSetOverlap</b> (HYPRE_Solver solver, int overlap) (Optional) Defines the overlap for the Schwarz method .....	76
5.7.2.36	int <b>HYPRE_BoomerAMGSetDomainType</b> (HYPRE_Solver solver, int domain_type) (Optional) Defines the type of domain used for the Schwarz method .....	77
	int <b>HYPRE_BoomerAMGSetSchwarzRlxWeight</b> (HYPRE_Solver solver, double schwarz_rlx_weight) (Optional) Defines a smoothing parameter for the additive Schwarz method .....	
5.7.2.37	int <b>HYPRE_BoomerAMGSetSym</b> (HYPRE_Solver solver, int sym) (Optional) Defines symmetry for ParaSAILS .....	77
5.7.2.38	int <b>HYPRE_BoomerAMGSetLevel</b> (HYPRE_Solver solver, int level) (Optional) Defines number of levels for ParaSAILS .....	77
5.7.2.39	int <b>HYPRE_BoomerAMGSetThreshold</b> (HYPRE_Solver solver, double threshold) (Optional) Defines threshold for ParaSAILS .....	78
5.7.2.40	int <b>HYPRE_BoomerAMGSetFilter</b> (HYPRE_Solver solver, double filter) (Optional) Defines filter for ParaSAILS .....	78
5.7.2.41	int <b>HYPRE_BoomerAMGSetDropTol</b> (HYPRE_Solver solver, double drop_tol) (Optional) Defines drop tolerance for PILUT .....	78
5.7.2.42	int	

	<b>HYPRE_BoomerAMGSetMaxNzPerRow</b> (HYPRE_Solver solver, int max_nz_per_row) <i>(Optional) Defines maximal number of nonzeros for PILUT</i> .....	78
5.7.2.43	int <b>HYPRE_BoomerAMGSetEuclidFile</b> (HYPRE_Solver solver, char *euclidfile) <i>(Optional) Defines name of an input file for Euclid parameters</i> .....	79
5.7.2.44	int <b>HYPRE_BoomerAMGSetGSMG</b> (HYPRE_Solver solver, int gsmg) <i>(Optional) Specifies the use of GSMG - geometrically smooth coarsening and interpolation</i> .....	79
	int <b>HYPRE_BoomerAMGSetNumSamples</b> (HYPRE_Solver solver, int num_samples) <i>(Optional) Defines the number of sample vectors used in GSMG or LS interpolation</i>	

Parallel unstructured algebraic multigrid solver and preconditioner

#### 5.7.2.1

```
int
HYPRE_BoomerAMGSetup (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
```

Set up the BoomerAMG solver or preconditioner. If used as a preconditioner, this function should be passed to the iterative solver `SetPrecond` function.

**Parameters:**

- `solver` — [IN] object to be set up.
- `A` — [IN] ParCSR matrix used to construct the solver/preconditioner.
- `b` — Ignored by this function.
- `x` — Ignored by this function.

#### 5.7.2.2

```
int
HYPRE_BoomerAMGSolve (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
```

Solve the system or apply AMG as a preconditioner. If used as a preconditioner, this function should be passed to the iterative solver `SetPrecond` function.

**Parameters:**

- `solver` — [IN] solver or preconditioner object to be applied.
- `A` — [IN] ParCSR matrix, matrix of the linear system to be solved
- `b` — [IN] right hand side of the linear system to be solved
- `x` — [OUT] approximated solution of the linear system to be solved

### 5.7.2.3

```
int  
HYPRE_BoomerAMGSolveT (HYPRE_Solver solver, HYPRE_ParCSRMatrix  
A, HYPRE_ParVector b, HYPRE_ParVector x)
```

Solve the transpose system  $A^T x = b$  or apply AMG as a preconditioner to the transpose system . If used as a preconditioner, this function should be passed to the iterative solver `SetPrecond` function.

**Parameters:**

- `solver` — [IN] solver or preconditioner object to be applied.
- `A` — [IN] ParCSR matrix
- `b` — [IN] right hand side of the linear system to be solved
- `x` — [OUT] approximated solution of the linear system to be solved

### 5.7.2.4

```
int HYPRE_BoomerAMGSetTol (HYPRE_Solver solver, double tol)
```

(Optional) Set the convergence tolerance, if BoomerAMG is used as a solver. If it is used as a preconditioner, this function has no effect. The default is 1.e-7.

### 5.7.2.5

```
int HYPRE_BoomerAMGSetMaxIter (HYPRE_Solver solver, int max_iter)
```

(Optional) Sets maximum number of iterations, if BoomerAMG is used as a solver. If it is used as a preconditioner, this function has no effect. The default is 20.

#### 5.7.2.6

```
int  
HYPRE_BoomerAMGSetMaxLevels (HYPRE_Solver solver, int max_levels)
```

(Optional) Sets maximum number of multigrid levels. The default is 25.

#### 5.7.2.7

```
int  
HYPRE_BoomerAMGSetStrongThreshold (HYPRE_Solver solver, double  
strong_threshold)
```

(Optional) Sets AMG strength threshold. The default is 0.25. For 2d Laplace operators, 0.25 is a good value, for 3d Laplace operators, 0.5 or 0.6 is a better value. For elasticity problems, a large strength threshold, such as 0.9, is often better.

#### 5.7.2.8

```
int  
HYPRE_BoomerAMGSetMaxRowSum (HYPRE_Solver solver, double  
max_row_sum)
```

(Optional) Sets a parameter to modify the definition of strength for diagonal dominant portions of the matrix. The default is 0.9. If max\_row\_sum is 1, no checking for diagonally dominant rows is performed.

### 5.7.2.9

```
int
HYPRE_BoomerAMGSetCoarsenType (HYPRE_Solver solver, int
coarsen_type)
```

(Optional) Defines which parallel coarsening algorithm is used. There are the following options for `coarsen_type`:

0	CLJP-coarsening (a parallel coarsening algorithm using independent sets.
1	classical Ruge-Stueben coarsening on each processor, no boundary treatment (not recommended!)
3	classical Ruge-Stueben coarsening on each processor, followed by a third pass, which adds coarse points on the boundaries
6	Falgout coarsening (uses 1 first, followed by CLJP using the interior coarse points generated by 1 as its first independent set)
7	CLJP-coarsening (using a fixed random vector, for debugging purposes only)
8	PMIS-coarsening (a parallel coarsening algorithm using independent sets, generating lower complexities than CLJP, might also lead to slower convergence)
9	PMIS-coarsening (using a fixed random vector, for debugging purposes only)
10	HMIS-coarsening (uses one pass Ruge-Stueben on each processor independently, followed by PMIS using the interior C-points generated as its first independent set)
11	one-pass Ruge-Stueben coarsening on each processor, no boundary treatment (not recommended!)

The default is 6.

### 5.7.2.10

```
int
HYPRE_BoomerAMGSetCycleType (HYPRE_Solver solver, int cycle_type)
```

(Optional) Defines the type of cycle. For a V-cycle, set `cycle_type` to 1, for a W-cycle set `cycle_type` to 2. The default is 1.

### 5.7.2.11

```
int
HYPRE_BoomerAMGSetNumGridSweeps (HYPRE_Solver solver, int
*num_grid_sweeps)
```

(Optional) Defines the number of sweeps for the fine and coarse grid, the up and down cycle.

Note: This routine will be phased out!!!! Use `HYPRE_BoomerAMGSetNumSweeps` or `HYPRE_BoomerAMGSetCycleNumSweeps` instead.

#### 5.7.2.12

```
int  
HYPRE_BoomerAMGSetNumSweeps (HYPRE_Solver solver, int num_sweeps)
```

(Optional) Sets the number of sweeps. On the finest level, the up and the down cycle the number of sweeps are set to `num_sweeps` and on the coarsest level to 1. The default is 1.

#### 5.7.2.13

```
int  
HYPRE_BoomerAMGSetCycleNumSweeps (HYPRE_Solver solver, int  
num_sweeps, int k)
```

(Optional) Sets the number of sweeps at a specified cycle. There are the following options for `k`:

the finest level	if <code>k=0</code>
the down cycle	if <code>k=1</code>
the up cycle	if <code>k=2</code>
the coarsest level	if <code>k=3</code> .

#### 5.7.2.14

```
int  
HYPRE_BoomerAMGSetGridRelaxType (HYPRE_Solver solver, int  
*grid_relax_type)
```

(Optional) Defines which smoother is used on the fine and coarse grid, the up and down cycle.

Note: This routine will be phased out!!!! Use `HYPRE_BoomerAMGSetRelaxType` or `HYPRE_BoomerAMGSetCycleRelaxType` instead.

#### 5.7.2.15

```
int  
HYPRE_BoomerAMGSetRelaxType (HYPRE_Solver solver, int relax_type)
```

(Optional) Defines the smoother to be used. It uses the given smoother on the fine grid, the up and the down cycle and sets the solver on the coarsest level to Gaussian elimination (9). The default is Gauss-Seidel (3).

There are the following options for `relax_type`:

0	Jacobi
1	Gauss-Seidel, sequential (very slow!)
2	Gauss-Seidel, interior points in parallel, boundary sequential (slow!)
3	hybrid Gauss-Seidel or SOR, forward solve
4	hybrid Gauss-Seidel or SOR, backward solve
5	hybrid chaotic Gauss-Seidel (works only with OpenMP)
6	hybrid symmetric Gauss-Seidel or SSOR
9	Gaussian elimination (only on coarsest level)

#### 5.7.2.16

```
int  
HYPRE_BoomerAMGSetCycleRelaxType (HYPRE_Solver solver, int  
relax_type, int k)
```

(Optional) Defines the smoother at a given cycle. For options of `relax_type` see description of `HYPRE_BoomerAMGSetRelaxType`). Options for `k` are

the finest level	if k=0
the down cycle	if k=1
the up cycle	if k=2
the coarsest level	if k=3.

### 5.7.2.17

```
int
HYPRE_BoomerAMGSetRelaxOrder (HYPRE_Solver solver, int relax_order)
```

(Optional) Defines in which order the points are relaxed. There are the following options for relax\_order:

0	the points are relaxed in natural or lexicographic order on each processor
1	CF-relaxation is used, i.e on the fine grid and the down cycle the coarse points are relaxed first, followed by the fine points; on the up cycle the F-points are relaxed first, followed by the C-points. On the coarsest level, if an iterative scheme is used, the points are relaxed in lexicographic order.

The default is 1 (CF-relaxation).

### 5.7.2.18

```
int
HYPRE_BoomerAMGSetGridRelaxPoints (HYPRE_Solver solver, int
**grid_relax_points)
```

(Optional) Defines in which order the points are relaxed.

Note: This routine will be phased out!!!! Use HYPRE\_BoomerAMGSetRelaxOrder instead.

### 5.7.2.19

```
int
HYPRE_BoomerAMGSetRelaxWeight (HYPRE_Solver solver, double
*relax_weight)
```

(Optional) Defines the relaxation weight for smoothed Jacobi and hybrid SOR.

Note: This routine will be phased out!!!! Use HYPRE\_BoomerAMGSetRelaxWt or HYPRE\_BoomerAMGSetLevelRelaxWt instead.

### 5.7.2.20

```
int
HYPRE_BoomerAMGSetRelaxWt (HYPRE_Solver solver, double
relax_weight)
```

(Optional) Defines the relaxation weight for smoothed Jacobi and hybrid SOR on all levels.

relax_weight > 0	this assigns the given relaxation weight on all levels
relax_weight = 0	the weight is determined on each level with the estimate $\frac{3}{4\ D^{-1/2}AD^{-1/2}\ }$ , where $D$ is the diagonal matrix of $A$ (this should only be used with Jacobi)
relax_weight = -k	the relaxation weight is determined with at most k CG steps on each level this should only be used for symmetric positive definite problems)

The default is 1.

### 5.7.2.21

```
int
HYPRE_BoomerAMGSetLevelRelaxWt (HYPRE_Solver solver, double
relax_weight, int level)
```

(Optional) Defines the relaxation weight for smoothed Jacobi and hybrid SOR on the user defined level. Note that the finest level is denoted 0, the next coarser level 1, etc. For nonpositive relax\_weight, the parameter is determined on the given level as described for HYPRE\_BoomerAMGSetRelaxWt. The default is 1.

### 5.7.2.22

```
int HYPRE_BoomerAMGSetOmega (HYPRE_Solver solver, double *omega)
```

(Optional) Defines the outer relaxation weight for hybrid SOR. Note: This routine will be phased out!!!! Use HYPRE\_BoomerAMGSetOuterWt or HYPRE\_BoomerAMGSetLevelOuterWt instead.

### 5.7.2.23

```
int HYPRE_BoomerAMGSetOuterWt (HYPRE_Solver solver, double omega)
```

(Optional) Defines the outer relaxation weight for hybrid SOR and SSOR on all levels.

omega > 0	this assigns the same outer relaxation weight omega on each level
omega = -k	an outer relaxation weight is determined with at most k CG steps on each level (this only makes sense for symmetric positive definite problems and smoothers, e.g. SSOR)

The default is 1.

### 5.7.2.24

```
int  
HYPRE_BoomerAMGSetLevelOuterWt (HYPRE_Solver solver, double  
omega, int level)
```

(Optional) Defines the outer relaxation weight for hybrid SOR or SSOR on the user defined level. Note that the finest level is denoted 0, the next coarser level 1, etc. For nonpositive omega, the parameter is determined on the given level as described for `HYPRE_BoomerAMGSetOuterWt`. The default is 1.

### 5.7.2.25

```
int  
HYPRE_BoomerAMGSetTruncFactor (HYPRE_Solver solver, double  
trunc_factor)
```

(Optional) Defines a truncation factor for the interpolation. The default is 0.

### 5.7.2.26

```
int
HYPRE_BoomerAMGSetSCommPkgSwitch (HYPRE_Solver solver, double
S_commpkg_switch)
```

(Optional) Defines the largest strength threshold for which the strength matrix S uses the communication package of the operator A. If the strength threshold is larger than this values, a communication package is generated for S. This can save memory and decrease the amount of data that needs to be communicated, if S is substantially sparser than A. The default is 0.05.

### 5.7.2.27

```
int
HYPRE_BoomerAMGSetSmoothType (HYPRE_Solver solver, int
smooth_type)
```

(Optional) Enables the use of more complex smoothers. The following options exist for `smooth_type`:

value	smoother	routines needed to set smoother parameters
6	Schwarz smoothers	HYPRE_BoomerAMGSetDomainType, HYPRE_BoomerAMGSetOverlap, HYPRE_BoomerAMGSetVariant, HYPRE_BoomerAMGSetSchwarzRlxWeigh
7	Pilut	HYPRE_BoomerAMGSetDropTol, HYPRE_BoomerAMGSetMaxNzPerRow
8	ParaSails	HYPRE_BoomerAMGSetSym, HYPRE_BoomerAMGSetLevel, HYPRE_BoomerAMGSetFilter, HYPRE_BoomerAMGSetThreshold
9	Euclid	HYPRE_BoomerAMGSetEuclidFile
16	CG preconditioned with Schwarz	see routines under 6
17	CG preconditioned with Pilut	see routines under 7
18	CG preconditioned with ParaSails	see routines under 8
19	CG preconditioned with Euclid	see routines under 9

The default is 6. Also, if no smoother parameters are set via the routines mentioned in the table above, default values are used.

### 5.7.2.28

```
int
HYPRE_BoomerAMGSetSmoothNumLevels (HYPRE_Solver solver, int
smooth_num_levels)
```

(Optional) Sets the number of levels for more complex smoothers. The smoothers, as defined by `HYPRE_BoomerAMGSetSmoothType`, will be used on level 0 (the finest level) through level `smooth_num_levels-1`. The default is 0, i.e. no complex smoothers are used.

#### 5.7.2.29

```
int  
HYPRE_BoomerAMGSetSmoothNumSweeps (HYPRE_Solver solver, int  
smooth_num_sweeps)
```

(Optional) Sets the number of sweeps for more complex smoothers. The default is 1.

#### 5.7.2.30

```
int HYPRE_BoomerAMGSetLogging (HYPRE_Solver solver, int logging)
```

(Optional) Requests additional computations for diagnostic and similar data to be logged by the user. Default to 0 for do nothing. The latest residual will be available if `logging > 1`.

#### 5.7.2.31

```
int  
HYPRE_BoomerAMGSetNumFunctions (HYPRE_Solver solver, int  
num_functions)
```

(Optional) Sets the size of the system of PDEs, if using the systems version. The default is 1.

### 5.7.2.32

```
int HYPRE_BoomerAMGSetNodal (HYPRE_Solver solver, int nodal)
```

(Optional) Sets whether to use the nodal systems version. The default is 0.

### 5.7.2.33

```
int HYPRE_BoomerAMGSetDofFunc (HYPRE_Solver solver, int *dof_func)
```

(Optional) Sets the mapping that assigns the function to each variable, if using the systems version. If no assignment is made and the number of functions is  $k > 1$ , the mapping generated is  $(0,1,\dots,k-1,0,1,\dots,k-1,\dots)$ .

### 5.7.2.34

```
int HYPRE_BoomerAMGSetVariant (HYPRE_Solver solver, int variant)
```

(Optional) Defines which variant of the Schwarz method is used. The following options exist for variant:

0	hybrid multiplicative Schwarz method (no overlap across processor boundaries)
1	hybrid additive Schwarz method (no overlap across processor boundaries)
2	additive Schwarz method
3	hybrid multiplicative Schwarz method (with overlap across processor boundaries)

The default is 0.

### 5.7.2.35

```
int HYPRE_BoomerAMGSetOverlap (HYPRE_Solver solver, int overlap)
```

(Optional) Defines the overlap for the Schwarz method. The following options exist for overlap:

0	no overlap
1	minimal overlap (default)
2	overlap generated by including all neighbors of domain boundaries

#### 5.7.2.36

```
int
HYPRE_BoomerAMGSetDomainType (HYPRE_Solver solver, int
domain_type)
```

(Optional) Defines the type of domain used for the Schwarz method. The following options exist for domain\_type:

0	each point is a domain
1	each node is a domain (only of interest in "systems" AMG)
2	each domain is generated by agglomeration (default)

#### 5.7.2.37

```
int HYPRE_BoomerAMGSetSym (HYPRE_Solver solver, int sym)
```

(Optional) Defines symmetry for ParaSAILS. For further explanation see description of ParaSAILS.

#### 5.7.2.38

```
int HYPRE_BoomerAMGSetLevel (HYPRE_Solver solver, int level)
```

(Optional) Defines number of levels for ParaSAILS. For further explanation see description of ParaSAILS.

#### 5.7.2.39

```
int  
HYPRE_BoomerAMGSetThreshold (HYPRE_Solver solver, double threshold)
```

(Optional) Defines threshold for ParaSAILS. For further explanation see description of ParaSAILS.

#### 5.7.2.40

```
int HYPRE_BoomerAMGSetFilter (HYPRE_Solver solver, double filter)
```

(Optional) Defines filter for ParaSAILS. For further explanation see description of ParaSAILS.

#### 5.7.2.41

```
int HYPRE_BoomerAMGSetDropTol (HYPRE_Solver solver, double drop_tol)
```

(Optional) Defines drop tolerance for PILUT. For further explanation see description of PILUT.

#### 5.7.2.42

```
int  
HYPRE_BoomerAMGSetMaxNzPerRow (HYPRE_Solver solver, int  
max_nz_per_row)
```

(Optional) Defines maximal number of nonzeros for PILUT. For further explanation see description of PILUT.

```
int
HYPRE_BoomerAMGSetEuclidFile (HYPRE_Solver solver, char *euclidfile)
```

(Optional) Defines name of an input file for Euclid parameters. For further explanation see description of Euclid.

```
int HYPRE_BoomerAMGSetGSMG (HYPRE_Solver solver, int gsmg)
```

(Optional) Specifies the use of GSMG - geometrically smooth coarsening and interpolation. Currently any nonzero value for gsmg will lead to the use of GSMG. The default is 0, i.e. (GSMG is not used)

## ParCSR ParaSails Preconditioner

### Names

	int	<b>HYPRE_ParaSailsCreate</b> (MPI_Comm comm, HYPRE_Solver *solver) <i>Create a ParaSails preconditioner</i>	
	int	<b>HYPRE_ParaSailsDestroy</b> (HYPRE_Solver solver) <i>Destroy a ParaSails preconditioner</i>	
5.7.3.1	int	<b>HYPRE_ParaSailsSetup</b> (HYPRE_Solver solver, HYPRE_ParCSRMatrix A, HYPRE_ParVector b, HYPRE_ParVector x) <i>Set up the ParaSails preconditioner</i> .....	80
5.7.3.2	int	<b>HYPRE_ParaSailsSolve</b> (HYPRE_Solver solver, HYPRE_ParCSRMatrix A, HYPRE_ParVector b, HYPRE_ParVector x) <i>Apply the ParaSails preconditioner</i> .....	81

5.7.3.9	int <b>HYPRE_ParaSailsBuildIJMatrix</b> (HYPRE_Solver solver, HYPRE_IJMatrix *pij_A) <i>Build IJ Matrix of the sparse approximate inverse (factor) .....</i>	83

Parallel sparse approximate inverse preconditioner for the ParCSR matrix format.

#### 5.7.3.1

```
int
HYPRE_ParaSailsSetup (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
```

Set up the ParaSails preconditioner. This function should be passed to the iterative solver **SetPrecond** function.

**Parameters:**

- solver** — [IN] Preconditioner object to set up.
- A** — [IN] ParCSR matrix used to construct the preconditioner.
- b** — Ignored by this function.
- x** — Ignored by this function.

### 5.7.3.2

```
int
HYPRE_ParaSailsSolve (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
```

Apply the ParaSails preconditioner. This function should be passed to the iterative solver `SetPrecond` function.

**Parameters:**

- `solver` — [IN] Preconditioner object to apply.
- `A` — Ignored by this function.
- `b` — [IN] Vector to precondition.
- `x` — [OUT] Preconditioned vector.

### 5.7.3.3

```
int
HYPRE_ParaSailsSetParams (HYPRE_Solver solver, double thresh, int nlevels)
```

Set the threshold and levels parameter for the ParaSails preconditioner. The accuracy and cost of ParaSails are parameterized by these two parameters. Lower values of the threshold parameter and higher values of levels parameter lead to more accurate, but more expensive preconditioners.

**Parameters:**

- `solver` — [IN] Preconditioner object for which to set parameters.
- `thresh` — [IN] Value of threshold parameter,  $0 \leq \text{thresh} \leq 1$ . The default value is 0.1.
- `nlevels` — [IN] Value of levels parameter,  $0 \leq \text{nlevels}$ . The default value is 1.

### 5.7.3.4

```
int HYPRE_ParaSailsSetFilter (HYPRE_Solver solver, double filter)
```

Set the filter parameter for the ParaSails preconditioner.

**Parameters:** `solver` — [IN] Preconditioner object for which to set filter parameter.  
`filter` — [IN] Value of filter parameter. The filter parameter is used to drop small nonzeros in the preconditioner, to reduce the cost of applying the preconditioner. Values from 0.05 to 0.1 are recommended. The default value is 0.1.

### 5.7.3.5

```
int HYPRE_ParaSailsSetSym (HYPRE_Solver solver, int sym)
```

Set the symmetry parameter for the ParaSails preconditioner.

**Parameters:** `solver` — [IN] Preconditioner object for which to set symmetry parameter.  
`sym` — [IN] Value of the symmetry parameter:

value	meaning
0	nonsymmetric and/or indefinite problem, and nonsymmetric preconditioner
1	SPD problem, and SPD (factored) preconditioner
2	nonsymmetric, definite problem, and SPD (factored) preconditioner

### 5.7.3.6

```
int HYPRE_ParaSailsSetLoadbal (HYPRE_Solver solver, double loadbal)
```

Set the load balance parameter for the ParaSails preconditioner.

**Parameters:** `solver` — [IN] Preconditioner object for which to set the load balance parameter.  
`loadbal` — [IN] Value of the load balance parameter,  $0 \leq \text{loadbal} \leq 1$ . A zero value indicates that no load balance is attempted; a value of unity indicates that perfect load balance will be attempted. The recommended value is 0.9 to balance the overhead of data exchanges for load balancing. No load balancing is needed if the preconditioner is very sparse and fast to construct. The default value when this parameter is not set is 0.

### 5.7.3.7

```
int HYPRE_ParaSailsSetReuse (HYPRE_Solver solver, int reuse)
```

Set the pattern reuse parameter for the ParaSails preconditioner.

**Parameters:**

- `solver` — [IN] Preconditioner object for which to set the pattern reuse parameter.
- `reuse` — [IN] Value of the pattern reuse parameter. A nonzero value indicates that the pattern of the preconditioner should be reused for subsequent constructions of the preconditioner. A zero value indicates that the preconditioner should be constructed from scratch. The default value when this parameter is not set is 0.

### 5.7.3.8

```
int HYPRE_ParaSailsSetLogging (HYPRE_Solver solver, int logging)
```

Set the logging parameter for the ParaSails preconditioner.

**Parameters:**

- `solver` — [IN] Preconditioner object for which to set the logging parameter.
- `logging` — [IN] Value of the logging parameter. A nonzero value sends statistics of the setup procedure to stdout. The default value when this parameter is not set is 0.

### 5.7.3.9

```
int  
HYPRE_ParaSailsBuildIJMatrix (HYPRE_Solver solver, HYPRE_IJMatrix  
*pij_A)
```

Build IJ Matrix of the sparse approximate inverse (factor). This function explicitly creates the IJ Matrix corresponding to the sparse approximate inverse or the inverse factor. Example: `HYPRE_IJMatrix ij_A; HYPRE_ParaSailsBuildIJMatrix(solver, &ij_A);`

**Parameters:** solver — [IN] Preconditioner object.  
 pij\_A — [OUT] Pointer to the IJ Matrix.

5.7.4

## ParCSR Euclid Preconditioner

**Names**

	int	<b>HYPRE_EuclidCreate</b> (MPI_Comm comm, HYPRE_Solver *solver) <i>Create a Euclid object</i>	
	int	<b>HYPRE_EuclidDestroy</b> (HYPRE_Solver solver) <i>Destroy a Euclid object</i>	
5.7.4.1	int	<b>HYPRE_EuclidSetup</b> (HYPRE_Solver solver, HYPRE_ParCSRMatrix A, HYPRE_ParVector b, HYPRE_ParVector x) <i>Set up the Euclid preconditioner</i> .....	85
5.7.4.2	int	<b>HYPRE_EuclidSolve</b> (HYPRE_Solver solver, HYPRE_ParCSRMatrix A, HYPRE_ParVector b, HYPRE_ParVector x) <i>Apply the Euclid preconditioner</i> .....	85
5.7.4.3	int	<b>HYPRE_EuclidSetParams</b> (HYPRE_Solver solver, int argc, char *argv[]) <i>Insert (name, value) pairs in Euclid's options database by passing Euclid the command line (or an array of strings)</i> .....	85
5.7.4.4	int	<b>HYPRE_EuclidSetParamsFromFile</b> (HYPRE_Solver solver, char *filename) <i>Insert (name, value) pairs in Euclid's options database</i> .....	86

MPI Parallel ILU preconditioner

Options summary:

Option	Default	Synopsis
-level	1	ILU( $k$ ) factorization level
-bj	0 (false)	Use Block Jacobi ILU instead of PILU
-eu_stats	0 (false)	Print internal timing and statistics
-eu_mem	0 (false)	Print internal memory usage

#### 5.7.4.1

```
int
HYPRE_EuclidSetup (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
```

Set up the Euclid preconditioner. This function should be passed to the iterative solver `SetPrecond` function.

**Parameters:**

- `solver` — [IN] Preconditioner object to set up.
- `A` — [IN] ParCSR matrix used to construct the preconditioner.
- `b` — Ignored by this function.
- `x` — Ignored by this function.

#### 5.7.4.2

```
int
HYPRE_EuclidSolve (HYPRE_Solver solver, HYPRE_ParCSRMatrix A,
HYPRE_ParVector b, HYPRE_ParVector x)
```

Apply the Euclid preconditioner. This function should be passed to the iterative solver `SetPrecond` function.

**Parameters:**

- `solver` — [IN] Preconditioner object to apply.
- `A` — Ignored by this function.
- `b` — [IN] Vector to precondition.
- `x` — [OUT] Preconditioned vector.

#### 5.7.4.3

```
int HYPRE_EuclidSetParams (HYPRE_Solver solver, int argc, char *argv[])
```

Insert (name, value) pairs in Euclid's options database by passing Euclid the command line (or an array of strings). All Euclid options (e.g, level, drop-tolerance) are stored in this database. If a (name, value) pair already exists, this call updates the value. See also: `HYPRE_EuclidSetParamsFromFile`.

**Parameters:**                    `argc` — [IN] Length of `argv` array  
                                  `argv` — [IN] Array of strings

#### 5.7.4.4

```
int  
HYPRE_EuclidSetParamsFromFile (HYPRE_Solver solver, char *filename)
```

Insert (name, value) pairs in Euclid's options database. Each line of the file should either begin with a "#," indicating a comment line, or contain a (name value) pair, e.g:

```
>cat optionsFile  
#sample runtime parameter file  
-blockJacobi 3  
-matFile /home/hysom/myfile.euclid  
-doSomething true  
-xx_coeff -1.0
```

See also: `HYPRE_EuclidSetParams`.

**Parameters:**                    `filename`[IN] — Pathname/filename to read

#### 5.7.5

### ParCSR Pilut Preconditioner

#### Names

```
int  
HYPRE_ParCSRPilutCreate (MPI_Comm comm, HYPRE_Solver *solver)  
                          Create a preconditioner object
```

```
int  
HYPRE_ParCSRPilutDestroy (HYPRE_Solver solver)  
                          Destroy a preconditioner object
```

```
int  
HYPRE_ParCSRPilutSetup (HYPRE_Solver solver,  
                          HYPRE_ParCSRMatrix A,  
                          HYPRE_ParVector b, HYPRE_ParVector x)
```

```
int
```

**HYPRE\_ParCSRPIlutSolve** (HYPRE\_Solver solver,  
HYPRE\_ParCSRMatrix A,  
HYPRE\_ParVector b, HYPRE\_ParVector x)

*Precondition the system*

int

**HYPRE\_ParCSRPIlutSetMaxIter** (HYPRE\_Solver solver, int max\_iter)  
*(Optional) Set maximum number of iterations*

int

**HYPRE\_ParCSRPIlutSetDropTolerance** (HYPRE\_Solver solver, double tol)  
*(Optional)*

int

**HYPRE\_ParCSRPIlutSetFactorRowSize** (HYPRE\_Solver solver, int size)  
*(Optional)*

## 5.7.6

### ParCSR PCG Solver

#### Names

int

**HYPRE\_ParCSRPCGCreate** (MPI\_Comm comm, HYPRE\_Solver \*solver)  
*Create a solver object*

int

**HYPRE\_ParCSRPCGDestroy** (HYPRE\_Solver solver)  
*Destroy a solver object*

int

**HYPRE\_ParCSRPCGSetup** (HYPRE\_Solver solver,  
HYPRE\_ParCSRMatrix A,  
HYPRE\_ParVector b, HYPRE\_ParVector x)

int

**HYPRE\_ParCSRPCGSolve** (HYPRE\_Solver solver,  
HYPRE\_ParCSRMatrix A,  
HYPRE\_ParVector b, HYPRE\_ParVector x)  
*Solve the system*

int

**HYPRE\_ParCSRPCGSetTol** (HYPRE\_Solver solver, double tol)  
*(Optional) Set the convergence tolerance*

int

**HYPRE\_ParCSRPCGSetMaxIter** (HYPRE\_Solver solver, int max\_iter)  
*(Optional) Set maximum number of iterations*

int

**HYPRE\_ParCSRPCGSetTwoNorm** (HYPRE\_Solver solver, int two\_norm)  
*(Optional) Use the two-norm in stopping criteria*

int

**HYPRE\_ParCSRPCGSetRelChange** (HYPRE\_Solver solver, int rel\_change)  
*(Optional) Additionally require that the relative difference in successive iterates be small*

int

**HYPRE\_ParCSRPCGSetPrecond** (HYPRE\_Solver solver,  
HYPRE\_PtrToParSolverFcn precond,  
HYPRE\_PtrToParSolverFcn  
precond\_setup,  
HYPRE\_Solver precond\_solver)  
*(Optional) Set the preconditioner to use*

int

**HYPRE\_ParCSRPCGGetPrecond** (HYPRE\_Solver solver,  
HYPRE\_Solver \*precond\_data)

int

**HYPRE\_ParCSRPCGSetLogging** (HYPRE\_Solver solver, int logging)  
*(Optional) Set the amount of logging to do*

int

**HYPRE\_ParCSRPCGSetPrintLevel** (HYPRE\_Solver solver, int print\_level)  
*(Optional) Set the print level*

int

**HYPRE\_ParCSRPCGGetNumIterations** (HYPRE\_Solver solver,  
int \*num\_iterations)  
*Return the number of iterations taken*

int

**HYPRE\_ParCSRPCGGetFinalRelativeResidualNorm** (HYPRE\_Solver  
solver,  
double \*norm)  
*Return the norm of the final relative residual*

int

**HYPRE\_ParCSRDiagScaleSetup** (HYPRE\_Solver solver,  
HYPRE\_ParCSRMatrix A,  
HYPRE\_ParVector y,  
HYPRE\_ParVector x)  
*Setup routine for diagonal preconditioning*

int

**HYPRE\_ParCSRDiagScale** (HYPRE\_Solver solver,  
HYPRE\_ParCSRMatrix HA,  
HYPRE\_ParVector Hy, HYPRE\_ParVector Hx)  
*Solve routine for diagonal preconditioning*

### 5.7.7

## ParCSR GMRES Solver

### Names

int  
**HYPRE\_ParCSRGMRESCreate** (MPI\_Comm comm,  
HYPRE\_Solver \*solver)  
*Create a solver object*

int  
**HYPRE\_ParCSRGMRESDestroy** (HYPRE\_Solver solver)  
*Destroy a solver object*

int  
**HYPRE\_ParCSRGMRESSetup** (HYPRE\_Solver solver,  
HYPRE\_ParCSRMatrix A,  
HYPRE\_ParVector b,  
HYPRE\_ParVector x)

int  
**HYPRE\_ParCSRGMRESSolve** (HYPRE\_Solver solver,  
HYPRE\_ParCSRMatrix A,  
HYPRE\_ParVector b, HYPRE\_ParVector x)  
*Solve the system*

int  
**HYPRE\_ParCSRGMRESSetKDim** (HYPRE\_Solver solver, int k\_dim)  
*(Optional) Set the maximum size of the Krylov space*

int  
**HYPRE\_ParCSRGMRESSetTol** (HYPRE\_Solver solver, double tol)  
*(Optional) Set the convergence tolerance*

int  
**HYPRE\_ParCSRGMRESSetMaxIter** (HYPRE\_Solver solver, int max\_iter)  
*(Optional) Set maximum number of iterations*

int  
**HYPRE\_ParCSRGMRESSetPrecond** (HYPRE\_Solver solver,  
HYPRE\_PtrToParSolverFcn precondition,  
HYPRE\_PtrToParSolverFcn  
precond\_setup,  
HYPRE\_Solver precondition\_solver)  
*(Optional) Set the preconditioner to use*

int  
**HYPRE\_ParCSRGMRESGetPrecond** (HYPRE\_Solver solver,  
HYPRE\_Solver \*precond\_data)

int  
**HYPRE\_ParCSRGMRESSetLogging** (HYPRE\_Solver solver, int logging)  
*(Optional) Set the amount of logging to do*

int  
**HYPRE\_ParCSRGMRESSetPrintLevel** (HYPRE\_Solver solver,  
int print\_level)  
*(Optional) Set print level*

int  
**HYPRE\_ParCSRGMRESGetNumIterations** (HYPRE\_Solver solver,  
int \*num\_iterations)  
*Return the number of iterations taken*

int

**HYPRE\_ParCSRGMRESGetFinalRelativeResidualNorm** (HYPRE\_Solver  
solver,  
double \*norm)

*Return the norm of the final relative residual*

# Class Graph
